

# Recommended: Computer Tune Up Every 6 Months!

## **Computer Tune Ups..., and Why!**

Over time computers lose speed and efficiency. Even everyday computer use causes a number of issues.

Making sure your Computer receives a Tune up annually, enables all aspects of your computer to run faster longer and more efficiently.

### **What a Computer Tune Up consist of.**

**Virus | Malware Detection:** All viruses rootkits and malware removed. This is the first step taken in our Tune up process.

**Check for Hard Disk Errors:** A Hard Disk Error check will scan your computers Hard Disk to find and repair system files and errors.

**Disk Clean-Up:** Running Disk Clean-Up will free up Hard Disk space by removing ignored, unused and temporary files. During this time we also take the time to remove any un-wanted programs.

**System Updates:** Keeping your computer up to date is critical. We make sure your computer is completely update. Windows Updates, Driver Updates, and Software Updates included.

**Disk Defrag:** Disk defragmentation describes the process of consolidating fragmented files on your computer's hard disk. Disk Defragmenter is a tool that rearranges the data on your hard disk and reunites fragmented files so your computer can run more efficiently.

**Miscellaneous:** During this time we take the time to focus on any requests from the customer they would like us to perform. As well as tasks such as cleaning componet and fan dust.
